Dear Hiring Manager,

I am interested in the Sr. Performance Engineer role with First Citizens Bank / SVB. My background aligns strongly with banking and financial-services performance engineering, LoadRunner/Performance Center, JMeter-style testing, Java/J2EE diagnostics, Dynatrace/APM monitoring, Python scripting, and root-cause performance analysis.

At AT&T, I worked as a Performance Test Engineer analyzing J2EE telecom applications under load, identifying throughput limits and bottlenecks across JDBC connections, threads, heap memory, CPU, and garbage collection. I used LoadRunner/Performance Center-style testing practices, JMX monitoring, Willy Introscope, and thread-dump automation to support test execution, performance baselines, and release-gate decisions.

My financial-services experience is also directly relevant. At Citi, I built telemetry and capacity analytics pipelines for enterprise banking systems, integrating performance and infrastructure data from BMC TrueSight, CA APM, and AppDynamics into reporting datasets and dashboards. At CA Technologies / TIAA-CREF, I supported a large APM environment and partnered with J2EE/WebLogic teams to diagnose bottlenecks using application telemetry, JVM indicators, SQL/Oracle signals, thread behavior, and infrastructure metrics.

For this role, I would bring a practical senior performance profile: defining performance requirements, designing test plans, supporting LoadRunner/JMeter-style execution, analyzing thread/heap/GC behavior, documenting findings, mentoring engineers, and communicating actionable tuning recommendations to stakeholders. For NeoLoad, I would position it carefully as adjacent to my LoadRunner and JMeter performance-testing background while ramping quickly on the specific tool.

I would welcome the opportunity to help First Citizens Bank strengthen performance engineering practices, improve release confidence, and deliver clear performance insights across banking platforms.

Sincerely
Sean Luka Girgis
