Dear Hiring Manager,

I am interested in the remote Data Engineer contract role with Yoh. The position aligns with my background in Python, SQL, PySpark, ETL, data warehousing, cloud data platforms, performance-oriented data modeling, and production analytics workflows.

At Citi, I built and supported Python, SQL, PySpark, and AWS-oriented data pipelines that ingested telemetry from more than 6,000 infrastructure endpoints and transformed raw operational data into curated reporting, analytics, and forecasting datasets. I also designed cloud data platform components using S3, Glue, Athena, Redshift, Oracle, and PySpark to support scalable transformation and stakeholder-facing reporting.

Your role emphasizes data engineering, cloud data processing, data warehousing, ETL tools, big data pipelines, SQL, Python/PySpark, and performance/security-oriented modeling with partitions, indexes, and views. My experience maps well through ETL modernization, SQL optimization, Oracle/PLSQL background, partition-aware design, data validation, production troubleshooting, documentation, and cross-functional delivery for enterprise analytics systems.

I want to be direct about fit: my strongest production cloud background is AWS rather than Azure, and my Databricks exposure is project/learning-level while Alteryx is not a primary tool in my background. Where I would bring immediate value is Python/PySpark and SQL data engineering, ETL delivery, data warehousing, performance tuning, production reliability, and fast adaptation to the client's Azure and BI tooling.

I would welcome the opportunity to discuss how my Python, SQL, PySpark, ETL, data warehousing, and cloud data engineering background can support this remote data engineering engagement.

Sincerely,
Sean Luka Girgis
