Dear Hiring Manager,

I am interested in the Data Enablement & Strategy Lead role with Allwyn Corporation. The position aligns with my background in AWS data platforms, Python, SQL, PySpark, Glue/S3/Redshift, data quality, metadata documentation, stakeholder enablement, and production-ready data engineering.

At Citi, I designed and supported AWS-oriented data platform components using S3, Glue, Athena, Redshift, Oracle, SQL, Python, and PySpark to transform telemetry from more than 6,000 infrastructure endpoints into curated reporting, analytics, and forecasting datasets. I also built validation, reconciliation, metric documentation, and operational support practices around those pipelines to improve trust and maintainability.

Your role emphasizes data platform adoption, scalable Databricks and AWS pipelines, PySpark and SQL, S3/Glue/Lambda/Kinesis/Redshift, data quality, governance, lineage, metadata management, stakeholder alignment, and enablement of BI and AI/ML teams. My experience maps strongly to the AWS/PySpark, SQL, data quality, reporting-layer, governance-aware delivery, stakeholder communication, and data product enablement portions of the role.

I want to be direct about fit: my strongest production background is AWS Glue/S3/Athena/Redshift with Python, SQL, and PySpark. Databricks, Delta Lake, Kinesis/Kafka, Lambda, and MLflow are active-learning or adjacent areas for me rather than deep production ownership. Where I would bring immediate value is AWS data engineering execution, platform standards, validation frameworks, metadata discipline, stakeholder translation, and practical enablement for analytics and data science consumers.

I would welcome the opportunity to discuss how my AWS, PySpark, SQL, data quality, governance-aware delivery, and stakeholder enablement background can support Allwyn's data platform strategy.

Sincerely,
Sean Luka Girgis
