Dear Hiring Manager,

I am interested in the remote AWS Data Engineer role with Acunor Infotech. The position aligns with my background in AWS Glue, Redshift, S3, Python, SQL, PySpark, ETL/ELT pipelines, data warehousing, dimensional modeling, SQL performance tuning, data quality, and production-ready data delivery.

At Citi, I designed and supported AWS-oriented data platform components using S3, Glue, Athena, Redshift, Oracle, SQL, Python, and PySpark to transform telemetry from more than 6,000 infrastructure endpoints into curated reporting, analytics, and forecasting datasets. I also built validation, reconciliation, metric documentation, and operational support practices around those pipelines to improve trust and maintainability.

Your role emphasizes AWS Glue, Lambda, Step Functions, MWAA/Airflow, Redshift, dbt, SQL performance tuning, dimensional modeling, ETL/ELT pipelines, CI/CD, and reliable analytics data platforms. My experience maps strongly to the AWS Glue/Redshift/S3, SQL, data warehousing, dimensional modeling, ETL, data quality, and performance-tuning portions of the role.

I want to be direct about fit: my strongest production background is AWS Glue/S3/Athena/Redshift with Python, SQL, and PySpark. dbt, AWS CDK, Jinja, CodePipeline, CodeCommit, MWAA, Step Functions, Lambda, and CDC are active-learning or adjacent areas for me rather than deep production ownership. Where I would bring immediate value is AWS data engineering execution, SQL optimization, dimensional modeling, ETL reliability, data quality, and stakeholder-ready analytics delivery.

I would welcome the opportunity to discuss how my AWS, Glue, Redshift, SQL, PySpark, dimensional modeling, ETL, and data quality background can support Acunor's sports analytics and customer data platform work.

Sincerely,
Sean Luka Girgis
