Dear Hiring Manager,

I am interested in the Senior Data Engineer remote W2 contract role with Info Dinamica. The position aligns strongly with my background in AWS, Python, SQL, PySpark, Athena, Redshift, Hadoop/Spark, data lakes, data warehouses, Airflow-style orchestration, data quality, and production pipeline reliability.

At Citi, I built and supported Python, SQL, PySpark, and AWS-oriented data pipelines that ingested telemetry from more than 6,000 infrastructure endpoints and transformed raw operational data into curated reporting, analytics, and forecasting datasets. I also designed AWS data platform components using S3, Glue, Athena, Redshift, Oracle, and PySpark to support scalable transformation, validation, and stakeholder-facing reporting.

Your role emphasizes Apache Spark/PySpark, Airflow orchestration, AWS Athena and Redshift, Hadoop, SQL over large structured and unstructured datasets, data lakes, data warehouses, CI/CD awareness, data quality frameworks, and reliable maintainable pipelines. My experience maps well through AWS-based data engineering, PySpark and SQL processing, SQL performance tuning, validation and reconciliation workflows, pipeline troubleshooting, documentation, and cross-functional delivery in enterprise environments.

I want to be direct about fit: my strongest production background is AWS Glue/S3/Athena/Redshift with Python, SQL, PySpark, and batch-oriented ETL. Kafka and Spark Structured Streaming are adjacent or active-learning areas for me rather than deep production ownership. Where I would bring immediate value is AWS/PySpark data engineering, Airflow-style orchestration thinking, Athena/Redshift SQL, data quality, production troubleshooting, and reliable delivery of scalable data pipelines.

I would welcome the opportunity to discuss how my AWS, PySpark, SQL, Athena, Redshift, data quality, and pipeline reliability background can support Info Dinamica's remote data engineering needs.

Sincerely,
Sean Luka Girgis
