Dear Hiring Manager,

I am interested in the Senior Data Engineer IS role with Providence Health & Services. The role aligns with my background in Python, SQL, PySpark/Spark, AWS/Redshift, ETL/ELT pipelines, data quality, documentation, mentoring, and AI/ML-ready data workflows.

At Citi, I built and supported Python, SQL, PySpark, and AWS-oriented data pipelines that ingested telemetry from more than 6,000 infrastructure endpoints and transformed raw operational data into curated reporting, analytics, and forecasting datasets. I also designed AWS data platform components using S3, Glue, Athena, Redshift, Oracle, and PySpark to support scalable transformation, validation, and stakeholder-facing reporting.

Your role emphasizes senior data engineering, Spark/PySpark, SQL, cloud data warehousing, ETL/ELT, data enrichment, documentation, collaboration, mentorship, and emerging AI/ML and RAG-oriented data patterns. My experience maps well through high-volume pipeline delivery, SQL optimization, data quality and reconciliation workflows, model-ready dataset preparation, dashboarding, production troubleshooting, documentation, and reusable engineering practices.

I want to be direct about fit: my strongest production background is regulated banking infrastructure telemetry and AWS/PySpark analytics pipelines rather than healthcare clinical data. EHR/EMR, HL7/FHIR, clinical notes, Kafka/Flink, NiFi/Informatica/Fivetran, LangChain/LlamaIndex, and vector databases are adjacent or learning areas for me rather than deep production ownership. Where I would bring immediate value is senior Python/PySpark/SQL data engineering, cloud warehouse delivery, data quality, documentation, mentoring, and AI-ready data foundations.

I would welcome the opportunity to discuss how my senior data engineering, PySpark, SQL, AWS/Redshift, data quality, and AI-ready pipeline experience can support Providence's enterprise information services work.

Sincerely,
Sean Luka Girgis
