Dear Hiring Manager,

I am interested in the Data Engineer II role with GM Financial. The position aligns with my background in SQL, Python, Spark/PySpark, ETL, JSON/Parquet processing, AWS/S3 object storage, Oracle, REST-style data integration, data lakes, documentation, troubleshooting, and AI/ML-ready datasets.

At Citi, I built and supported Python, SQL, PySpark, and AWS-oriented data pipelines that ingested telemetry from more than 6,000 infrastructure endpoints and transformed raw operational data into curated reporting, analytics, and forecasting datasets. I also designed AWS data platform components using S3, Glue, Athena, Redshift, Oracle, and PySpark to support scalable transformation, validation, and stakeholder-facing reporting.

Your role emphasizes batch and streaming data engineering technologies, SQL insights, source data formats such as JSON and Parquet, Oracle and relational databases, object storage, Spark/Hadoop-style processing, ETL processes, data lakes and lakehouses, documentation, monitoring, troubleshooting, and datasets that support machine learning and search-based analytics. My experience maps strongly through large-scale telemetry pipelines, SQL optimization, Python/PySpark processing, data validation, production troubleshooting, and model-ready forecasting datasets.

I want to be direct about fit: my strongest production background is AWS/PySpark/SQL data engineering and regulated banking infrastructure telemetry, not Adobe Experience Platform or RTCDP ownership. Adobe/XDM/CDP tools, Kafka/Flume, NoSQL/search stores, Azure DevOps, and Databricks are adjacent or active-learning areas for me rather than deep production ownership. Where I would bring immediate value is SQL/Python data engineering, Spark-style processing, object-storage data patterns, ETL reliability, documentation, troubleshooting, and AI/ML-supporting data foundations.

I would welcome the opportunity to discuss how my SQL, Python, Spark/PySpark, AWS/S3, ETL, data quality, and production troubleshooting background can support GM Financial's data engineering and digital innovation efforts.

Sincerely,
Sean Luka Girgis
