Dear Hiring Manager,

I am interested in the Site Reliability Engineer III contract role with Apex Systems in Plano. The position aligns with my background in enterprise monitoring, BMC TrueSight, Dynatrace, Python, Linux/Unix, production troubleshooting, cloud platform support, workflow automation concepts, CI/CD concepts, and cross-team operational delivery.

At Citi, I supported enterprise monitoring and capacity workflows across BMC TrueSight/TSCO, CA Wily/APM, AppDynamics, Oracle, AWS-backed reporting layers, and large-scale infrastructure telemetry sources. I built Python, Pandas, PySpark, and SQL pipelines that transformed telemetry from more than 6,000 infrastructure endpoints into validated dashboards, forecasting datasets, KPI reports, and executive insights.

Your role emphasizes enterprise security, orchestration, workflow automation, CI/CD pipelines, cloud platforms, Linux and Windows administration, Python, Ansible/Terraform, enterprise logging and monitoring, Dynatrace APM, BMC Remedy, ServiceNow, and collaboration with product and engineering teams. My experience maps strongly through enterprise observability, BMC TrueSight, Dynatrace, Linux/Unix support, Python automation, monitoring dashboards, production troubleshooting, operational runbooks, cloud data/platform exposure, and cross-functional SRE-style support.

I want to be direct about fit: my strongest production background is observability, performance/capacity engineering, Python/shell automation, Linux/Unix, and enterprise monitoring. Ansible Tower, Terraform, Windows administration, .NET, and Tableau are adjacent or transferable areas for me rather than deep production ownership. Where I would bring immediate value is monitoring reliability, production issue diagnosis, operational documentation, Python automation, and technical coordination across infrastructure and engineering teams.

I would welcome the opportunity to discuss how my BMC TrueSight, Dynatrace, Python, Linux/Unix, monitoring, and production support background can support Apex Systems' SRE platform work in Plano.

Sincerely,  
Sean Luka Girgis
