Dear Hiring Manager,

I am interested in the Data Engineer II role with Lantern in Dallas. The position aligns well with my background in Spark/PySpark, Python, SQL, production data pipelines, data ingestion, transformation, data quality, data modeling, cloud data platforms, testing concepts, documentation, and stakeholder delivery.

At Citi, I built Python, SQL, Pandas, PySpark, and AWS-oriented data pipelines that ingested telemetry from more than 6,000 infrastructure endpoints and transformed raw operational data into curated reporting, analytics, forecasting, and validation datasets. I also supported production jobs by investigating source feeds, transformation logic, SQL behavior, failed outputs, missing or late data, latency symptoms, and downstream reporting issues.

Your role emphasizes robust data pipelines, ingestion, transformation, data quality, data models, exports, production job support, testing, design documents, PoCs, cloud platforms, Spark, Python, SQL, data lake/lakehouse solutions, and clear communication with technical and non-technical stakeholders. My experience maps strongly through PySpark/Python/SQL data engineering, validation and reconciliation workflows, SQL performance tuning, production troubleshooting, AWS data platform work, documentation, and stakeholder-facing analytics.

I want to be direct about fit: my strongest production cloud stack is AWS Glue/S3/Athena/Redshift with Oracle/SQL and PySpark. Azure, Microsoft SQL Server, Terraform, HL7/X12/FHIR, REST APIs, and Power BI are adjacent or learning areas for me rather than deep production ownership. Where I would bring immediate value is production pipeline support, data quality, testing discipline, SQL/PySpark delivery, documentation, and practical collaboration with engineering and business teams.

I would welcome the opportunity to discuss how my Spark/PySpark, Python, SQL, data quality, production support, and cloud data engineering background can support Lantern's data engineering team.

Sincerely,
Sean Luka Girgis
