Dear Hiring Manager,

I am interested in the IT Applications Analyst / Application Support Analyst role with Paladin Consulting. The position aligns well with my background in application support, SQL, financial-services systems, root cause analysis, data analysis, test validation, documentation, Agile-style collaboration, and business-user communication.

At Citi, I supported production reporting and data workflows in a regulated financial-services environment, using SQL, Python, Pandas, PySpark, and dashboards to investigate data discrepancies, validate outputs, troubleshoot missing or late feeds, and explain findings to business and technical stakeholders. I also created runbooks, metric definitions, validation checkpoints, support procedures, and documentation to make recurring support work more reliable.

Your role emphasizes application and business process support, requirements clarification, backlog items, test scripts, regression testing, root cause analysis, complex dataset analysis, SQL queries, data maintenance, demos, training materials, Agile/Scrum, and finance business processes. My experience maps strongly through SQL-driven analysis, production support, issue triage, validation and reconciliation, test/result documentation, stakeholder communication, and financial-services technology delivery.

I want to be direct about fit: my strongest background is financial-services technology, application/data support, SQL, RCA, testing support, documentation, and production reliability. Advanced Excel, Microsoft SQL-specific work, API support, and finance-process areas such as GL, Payables, Receivables, Tax, Treasury, and Procurement are areas I can support and learn around, while my immediate value is in troubleshooting, SQL analysis, validation, documentation, and communication across business and IT teams.

I would welcome the opportunity to discuss how my application support, SQL, financial-services, testing, RCA, and business-user communication background can support Paladin's long-term contract needs.

Sincerely,
Sean Luka Girgis
