Professional Summary

Senior banking technology and data professional with 20+ years of enterprise experience across SQL, Python, data profiling, data management, MIS-style reporting, Excel-based analysis, production data validation, risk/control awareness, audit-style documentation, automation, and stakeholder communication. Strong background analyzing complex operational datasets, identifying data quality gaps, validating reporting outputs, automating repetitive checks, and translating technical findings into clear business insights for financial-services teams. Best aligned to banking data analyst and reporting roles requiring SQL, Python, data profiling, MIS reporting, process improvement, control-gap identification, Excel/PowerPoint communication, and production data validation; SAS, Teradata, VBA, Tableau, and Cognos are positioned carefully as adjacent or learning areas rather than overstated production ownership.

Professional Experience

Senior Capacity & Data Engineer at CITI (2017-11 – 2025-12)

- Analyzed large banking infrastructure datasets using SQL, Python, Pandas, and PySpark to generate reporting outputs, business insights, forecasting views, and operational recommendations.
- Built data profiling and validation workflows across 6,000+ infrastructure endpoints to identify missing feeds, inconsistent metrics, unmatched records, abnormal trends, and reporting discrepancies.
- Developed MIS-style capacity and performance reports that translated complex utilization, risk, and trend data into clear views for technical teams and senior stakeholders.
- Implemented data quality, reconciliation, and control-style checks across BMC TrueSight/TSCO, CA Wily/APM, AppDynamics, Oracle, and AWS-backed reporting layers.
- Identified process gaps and automated redundant manual reporting checks using SQL, Python, Pandas, and repeatable validation workflows.
- Optimized SQL queries, Oracle schemas, Redshift workloads, indexes, views, and reporting data models for performance, accuracy, and maintainability.
- Documented data flows, metric definitions, validation checkpoints, control notes, issue findings, and support procedures to improve auditability and knowledge transfer.
- Partnered with infrastructure, analytics, application, engineering, and business teams to explain findings, resolve data issues, and improve reporting accuracy.

Performance Engineer at G6 Hospitality LLC (2017-03 – 2017-11)

- Analyzed Dynatrace AppMon and Gomez Synthetic Monitoring datasets to identify trends, data quality issues, and performance improvement opportunities.
- Built dashboards and reporting views that converted raw monitoring data into actionable insights for business and engineering stakeholders.
- Led the FAST project, using real-user and synthetic monitoring data to identify optimization opportunities and communicate findings to technical teams.

- Collaborated with application and infrastructure teams to validate findings, document issues, and support practical performance improvements.

SME for CA APM (Senior Consultant) at CA Technologies / TIAA-CREF (2011 – 2016)

- Supported a large financial-services monitoring environment with 50+ Enterprise Managers and 4,000–6,000 instrumented agents.
- Built Perl and KornShell automation for extracting, profiling, validating, transforming, and distributing performance data, replacing manual reporting workflows with repeatable processes.
- Designed dashboards, alert rules, SLA thresholds, reporting standards, and technical documentation used by support, infrastructure, and application teams.
- Provided troubleshooting guidance, training material, onboarding support, and knowledge sharing to improve monitoring and reporting adoption.

Performance Test Engineer at AT&T (2010-08 – 2011-07)

- Developed and executed performance test plans for enterprise telecom applications, including baseline comparisons, regression review, and release-readiness analysis.
- Analyzed application behavior under load to identify throughput limits, SQL/JDBC bottlenecks, CPU, memory, thread, and garbage-collection issues.
- Documented test results, expected behavior, defects, risks, and recommendations for engineering and release teams.

Senior Systems & Data Migration Engineer at Sabre (2008-05 – 2010)

- Led migration validation for a high-throughput shopping engine moving from 200+ MySQL nodes to a 6-node Oracle RAC cluster.
- Built validation and regression testing utilities to verify correctness across millions of migrated transaction records.
- Optimized SQL and Oracle access patterns for high-volume workloads while reducing physical hardware footprint by 95%.
- Supported phased cutover, troubleshooting, documentation, and production-readiness activities for a mission-critical enterprise migration.

Education

Post-Graduate Diploma in Computer Engineering Technology / Computer Science

Humber College, Toronto, Canada

Bachelor of Science in Civil Engineering

Zagazig University, Egypt

Skills

Flagship Projects

Production Data Quality and RCA Workflow

Built validation and reconciliation workflows for production reporting datasets, including row-count checks, null checks, missing feed diagnosis, unmatched join checks, and issue documentation.

Technologies: SQL, Python, Pandas, Data Profiling, Data Validation, RCA

HorizonScale — Capacity Forecasting and MIS Reporting

Built Python/Pandas/PySpark workflows to process infrastructure telemetry, validate outputs, prepare forecasting datasets, and produce actionable reporting for capacity and risk discussions.

Technologies: Python, Pandas, PySpark, SQL, Forecasting, Reporting

Enterprise APM Reporting Automation

Built Perl and KornShell automation for extracting, profiling, validating, and distributing performance telemetry across large financial-services monitoring environments.

Technologies: KornShell/ksh, Perl, Unix/Linux, CA APM, SQL, Automation
