Dear Hiring Manager,

I am interested in the Strategic Data Analyst, Operations role with FedEx Office in Plano. The position aligns with my background in enterprise reporting, dashboards, data quality, business analytics, stakeholder communication, cross-functional delivery, Agile collaboration, and operational insights.

At Citi, I built analytics and reporting workflows that transformed telemetry from more than 6,000 infrastructure endpoints into dashboards, KPI reports, forecasting views, and decision-support datasets. I used SQL, Python, Pandas, PySpark, Oracle, and Redshift to analyze complex data, identify trends and anomalies, improve reporting accuracy, and communicate actionable findings to technical and business stakeholders.

Your role emphasizes business intelligence solutions, ad-hoc reports, dashboards, data modeling, visualization, data quality, analytics project delivery, governance, stakeholder management, Agile/Scrum, roadmap/enhancement work, and communicating insights that drive business decisions. My experience maps strongly through enterprise reporting, data quality controls, dashboard development, cross-functional requirements clarification, defect prioritization, documentation, and operational analytics.

I want to be direct about fit: my strongest production background is SQL/Python-driven analytics, reporting, data quality, operational dashboards, and stakeholder delivery. Tableau, Power BI, retail/network analytics, formal project-budget ownership, and marketing analytics are adjacent or transferable areas for me rather than my deepest production ownership. Where I would bring immediate value is reliable reporting, data quality, analytical communication, operational insight generation, and coordination with IT and business partners.

I would welcome the opportunity to discuss how my analytics, dashboarding, data quality, stakeholder communication, and enterprise reporting background can support FedEx Office operations and reporting innovation.

Sincerely,
Sean Luka Girgis
