Dear Hiring Manager,

I am interested in the C/C++ Pro*C SQL W2 contract role with HPTech Inc. The position aligns strongly with my earlier enterprise engineering background in C, C++, Pro*C, embedded SQL, Oracle/RDBMS, Unix/Linux, multithreading, performance tuning, and legacy modernization.

At Corpus Inc. / Sprint, I developed and supported high-availability telecom billing and customer-management interfaces using C, C++, Pro*C, Oracle, PL/SQL, SQL scripts, XML, POSIX threads, mutexes, semaphores, socket programming, KornShell, Perl, HP-UX, SunOS, and Linux. I also supported production defects, deployment activities, data maintenance, performance improvements, and QA cycles for mission-critical billing systems.

At Sabre, I led validation and production-readiness support for a high-throughput shopping-engine migration from more than 200 MySQL nodes to a 6-node Oracle RAC cluster. I built C++/OCI/OCI validation utilities, optimized Oracle access patterns, supported schema conversion and cutover activities, and helped preserve transaction correctness and performance at enterprise scale.

I want to be direct about fit: my deepest C/C++/Pro*C production work is older, but it is real and substantial. My recent work has been more focused on Python, SQL, data pipelines, monitoring, and production reliability. Where I would bring value to this role is legacy enterprise engineering, embedded SQL, Oracle/RDBMS integration, Unix/Linux troubleshooting, performance tuning, modernization support, documentation, and practical production ownership.

I would welcome the opportunity to discuss how my C/C++/Pro*C, SQL, Oracle, Unix/Linux, performance tuning, and legacy modernization background can support HPTech's enterprise application work.

Sincerely,
Sean Luka Girgis
