Dear Hiring Manager,

I am interested in the C++ Developer role with Tradeweb Markets. The position aligns with my enterprise engineering background in C++, object-oriented design, multithreading, Linux/Unix, Windows concepts, backend production systems, performance tuning, and financial-services technology.

Earlier in my career, I developed and supported high-availability telecom billing and enterprise interface systems using C, C++, Pro*C, Oracle, PL/SQL, SQL scripts, XML, POSIX threads, mutexes, semaphores, socket programming, Unix/Linux, and production support practices. I designed reusable threading and socket utility libraries, reverse-engineered undocumented APIs, supported QA cycles, resolved defects, and documented system behavior for mission-critical applications.

At Sabre, I led validation and production-readiness support for a high-throughput shopping-engine migration from more than 200 MySQL nodes to a 6-node Oracle RAC cluster. I built C++/OCI/OCI validation utilities, optimized Oracle access patterns, supported schema conversion and cutover activities, and helped preserve transaction correctness and performance at enterprise scale.

I want to be direct about fit: my deepest C++ production work is older, while my recent work has focused more on Python, SQL, production reliability, telemetry, and data engineering. However, the underlying strengths remain relevant to Tradeweb: multithreaded backend systems, performance tuning, production issue ownership, financial/enterprise environments, QA/support collaboration, documentation, and disciplined troubleshooting across Windows/Linux-style platforms.

I would welcome the opportunity to discuss how my C++ systems, multithreading, high-throughput performance, SQL/RDBMS, and production support background can contribute to Tradeweb's next-generation trading platform services.

Sincerely,
Sean Luka Girgis
