Dear Hiring Manager,

I am interested in the Data Engineer - Technical/User Support role with Caterpillar in Irving. The position aligns strongly with my background in Python, SQL, AWS Glue, ETL pipelines, data modeling, data quality, analytics support, RCA, and stakeholder-facing production data support.

At Citi, I built and supported Python, SQL, Pandas, PySpark, and AWS-oriented workflows that ingested telemetry from more than 6,000 infrastructure endpoints and transformed raw data into curated reporting, analytics, forecasting, and validation datasets. I used AWS S3, Glue, Athena, Redshift, Oracle, and SQL to support scalable ingestion, transformation, querying, and analytics delivery.

Your role emphasizes ETL pipelines, data models, data warehouses/lakes, multiple data sources including APIs/logs/databases, performance tuning, data accuracy and completeness checks, governance, and support for data scientists, analysts, business stakeholders, and end users. My experience maps strongly through SQL/Python pipeline work, AWS Glue/S3/Redshift data patterns, data quality checks, reporting reliability, user-reported data issue debugging, RCA documentation, and clear stakeholder communication.

I want to be direct about fit: my strongest production stack is AWS Glue/S3/Athena/Redshift, Python, SQL, PySpark, Oracle, ETL, data quality, and production reporting reliability. Snowflake, BigQuery, PostgreSQL/MySQL, Lambda, and Step Functions are adjacent or transferable areas for me rather than my deepest long-term production ownership. Where I would bring immediate value is building and supporting reliable pipelines, diagnosing data issues, tuning SQL/reporting layers, documenting RCAs, and helping teams trust the data they use for decisions.

I would welcome the opportunity to discuss how my Python, SQL, AWS data engineering, ETL, data quality, RCA, and user-support background can support Caterpillar's analytics and data platform needs.

Sincerely,
Sean Luka Girgis
